

Ratio Practices Survey Errata

1. **Question 64: Q64: Is property that is not required to be appraised during a given year required to have its value updated during the interim year or years?**

The last tally sheet showed 5. Appendix C shows 6 because Alaska was evidently counted. Idaho should be counted as a yes so the answer with counting Idaho is 7. So instead of Idaho showing a blank, a "yes" should be noted.

2. **Question 84: Q84: If outliers are trimmed, what procedure do you use? (check all that apply)**

Nine "Other" responses contained in the tally sheet were not previously reported in our document. Four of these were re-classed to the "Fixed Symmetric pts. $<.5$ or >1.5 " so the total in Appendix B should be change from 4 to 8 in this class, and an "other" class should be added to show 5 remaining in this "other" class. This data is not shown in Appendix C (only shown in appendix B) so the individual states are not shown in our document. However for the record it is noted that OH, ME, GA, and FL were re-classed "Fixed etc" and AK, IL, ME, SC and WYO were left to make up the "other" class.

3. **Question 80: Q80: Regarding sample size, what is the smallest sample you will use to evaluate any category of property?**

The response for Commonwealth of Pennsylvania was changed from "more than 30 observations," to "less than 30 observations" on October 25, 2010.
